ERRATA

(Updated December 20, 2016)

The SF-8 mental component summary (MCS) and physical component summary (PCS) scores provided in the original National Beneficiary Survey (NBS) data files were calculated incorrectly. The original values excluded an intercept constant needed to scale the scores to general population norms. The intercept constant values are -10.11675 for the MCS, and -9.36839 for the PCS.

Because the intercept constants were not applied, the scores provided in the original data files were too high relative to what they should be on the population-based scale. Thus, if comparing NBS respondents to the general population, NBS respondents would appear healthier than they should. However, within the NBS respondent sample, the scores still appropriately represented greater or lesser mental and physical health according to the design of the SF-8.

The MCS and PCS variables included in the current data files have been corrected and are now valid for comparisons to other populations.

I. CODEBOOK OVERVIEW

A. OVERVIEW OF THE NATIONAL BENEFICIARY SURVEY

1. Purpose of the Survey

As part of an evaluation of the Ticket to Work and Self-Sufficiency program (TTW), Mathematica Policy Research (MPR) conducted the first round of the National Beneficiary Survey (NBS) in 2004. The survey, sponsored by the Social Security Administration's (SSA) Office of Disability and Income Security Programs, collects cross-sectional data from a national sample of Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) beneficiaries (hereafter referred to as the Representative Beneficiary Sample) and a sample of TTW participants (hereafter referred to as the Ticket Participant Sample). To reduce the risk of disclosure, TTW participants are not included on this file.

2. Data Collection Overview

Round 1 CATI data collection for both samples began in February 2004. This survey was designed as a computer-assisted telephone interviewing (CATI) survey with computer-assisted personal interviewing (CAPI) follow-up for beneficiaries who did not respond to the CATI interview or who requested an in-person interview to facilitate their participation in the survey. The survey instrument was identical in each. Whenever possible, the interview was conducted with the sample person. If the sample person was unable to complete either a telephone or in-person interview due to their disability, a proxy respondent was sought. To promote response among Hispanic populations, the questionnaire was available in Spanish. For languages other than English and Spanish, interpreters conducted the interviews. A number of additional accommodations were made available for those with hearing and/or speech impairments including teletypewriter (TTY), Telecommunications Relay Service (TRS), amplifiers, and

instant messaging technology. The NBS round 1 sample comprised 9,064 cases selected for the Representative Beneficiary sample.

B. OVERVIEW OF THE SAMPLE DESIGN

The NBS used a multi-stage sampling design with a supplemental single-stage sample for some Ticket participant populations. For Round 1, Primary Sampling Units (PSUs) were formed in every state based on counts of the number of beneficiaries in each county provided by The Social Security Administration (SSA). A three-stage sample design was used to select the Representative Beneficiary Sample:

- In the first stage, the number of PSUs to be selected from each of the Phase 1, 2, and 3 states was identified. The total number of PSUs to be selected was 80.
- In the second stage, PSUs were selected with probability proportional to the size of the beneficiary population in the PSUs. Because one PSU was selected twice given the large number of beneficiaries in the included county, the final number of PSUs selected was 79. In the two largest PSUs (which were selected with certainty), second-stage sampling units (SSUs) were formed within the PSUs based on zip code; two secondary units were selected in one of these PSUs and four secondary units were selected in the other PSU.¹
- In the third stage, the beneficiary sample was selected in four age-specific strata.

The target population for both the Representative Beneficiary Sample consisted of SSI and SSDI beneficiaries between the ages of 18 and 64 and included beneficiaries in all 50 states and the District of Columbia who were in active pay status as of June 2003.² The beneficiary target population included approximately 9.4 million persons; approximately 1.9 million beneficiaries were in the sampled PSUs. While the focus of the survey was on working age beneficiaries who are Ticket eligible (not including Medical Improvement Expected (MIE) and former youth

¹ These six SSUs and the other 77 PSUs (83 units) are treated as unique PSUs for the beneficiary sample on the file.

² Beneficiaries in the Trust Territories and Puerto Rico were excluded from the survey target population.

beneficiaries without a CDR allowance), a small sample of all Ticket-ineligible beneficiaries was included so that the survey results would represent the entire working age population. There were two subpopulations of beneficiaries who are not eligible for Ticket participation but were included in the survey samples to give complete coverage of the national beneficiary population:

- Beneficiaries who were designated as Medical Improvement Expected (MIE) at the time they received their allowances and who have not yet completed a first Continuing Disability Review (CDR)
- Young SSI recipients who were receiving benefits because of their eligibility as a child, and were in the process of completing a re-determination under the adult eligibility criteria.

In order to ensure a sufficient number of persons seeking work, the Representative Beneficiary Sample was classified into sampling strata based on age, with persons in the younger age categories selected at higher rates than those in the oldest age category. The Representative Beneficiary Sample was divided into the following age groups: 18-24, 25-39, 40-54, and 55-64, which were used as the sampling strata.

C. THE NBS QUESTIONNAIRE

The National Beneficiary Survey collects data on a wide range of topics including employment, disability, experience with a variety of SSA programs, employment services used in the past year, health and functional status, health insurance, income and other assistance, and sociodemographic information. The survey items were developed and initially pre-tested as part of a separated contract held by Westat. Revisions were made by MPR to prepare the instrument for CATI/CAPI programming and the programmed instrument was pre-tested prior to fielding. The questionnaire is divided into 18 sections, labeled A through M, which serve the following purposes:

Section A - Screener. This section confirms that the correct sample person has been contacted and verifies that the sample person is still eligible for the survey. The respondent is

also administered a cognitive assessment in this section to ensure that they are capable of completing the interview. Because they are used for survey administration purposes only, items from section A are not included on the public use file.

Section B - Disability and Current Work Status. This section collects information on the beneficiary's limiting physical or mental condition(s) and current employment status. If the beneficiary is not currently employed, the section explores reasons for not working. This section also includes questions designed to determine the job characteristics that are important to beneficiaries, and collects information about work-related goals and expectations.

Section C - Current Employment. Questions in this section collect detailed information about the beneficiary's current job(s). Respondents are asked about the type of work performed, type of employer, hours worked, benefits offered, and wages earned. The section also asks about work-related accommodations, those received, as well as those needed but not received. Other questions solicit information about job satisfaction.

Section D - Jobs/Other Jobs During 2003. This section collects information about employment during the 2003 calendar year, including: type(s) of employer(s), hours worked, wages earned, and reasons for leaving employment, if applicable. Other questions ask if beneficiaries worked or earned less than they could have (and if so, the reasons why), and collect information about experiences related to Social Security benefit adjustments due to work.

Section E - Awareness of SSA Work Incentive Programs and Ticket to Work. This section includes questions designed to assess whether the beneficiary is aware of, or is participating in, specific SSA work incentive programs and services. For the TTW program, information is collected on how beneficiaries learned about the program, the names of providers they signed up with, and the dates they signed up with their service providers. Items that could identify TTW participants have been removed from the public use file.

Section F - Ticket Non-Participants in 2003. This section is administered to beneficiaries not participating in the TTW program and collects reasons for non-participation. It asks whether the beneficiary has attempted to learn about employment opportunities (including TTW), problems the beneficiary may have had with Employment Networks or other employment agencies, and how those problems were handled or resolved. Only items asked of beneficiaries who were aware of TTW but did not try to get information or participate in the program are included on the public use file.

Section G - Employment-Related Services and Supports Used in 2003. Questions in this section ask beneficiaries about their use of employment-related services in calendar year 2003, including: the types of services received, the types of providers used, how long they received services, how the services were paid for, and reasons for and satisfaction with service utilization. Other questions ask about sources of information about services and the nature of any services that were needed but not received.

Section H - Ticket Participants in 2003. This section asks respondents who indicate earlier in the interview that they participated in TTW in 2003 about their experiences with the program. Because they would identify Ticket participants, items from section H are not included on the public use file.

Section I - Health and Functional Status. This section includes questions about the beneficiary's health status and everyday functioning, including the need for special equipment or assistive devices. Information is solicited regarding: general health status (via the SF-8^{TM3}); difficulties with Activities of Daily Living (ADLs) and Instrumental Activities of Daily Living

³ SF-8TM is a trademark of QualityMetric, Inc..

(IADLs); a variety of functional limitations; substance abuse/dependence; and treatment for mental health conditions.

Section J - Health Insurance. Questions in this section collect information about sources of health insurance coverage, both at interview and during calendar year 2003.

Section K - Income and Other Assistance. Questions in this section ask about sources of income, including income received from earnings, Social Security, workers' compensation, and other government programs and sources.

Section L - Sociodemographic Information. This section collects basic demographic information about the beneficiary, such as race, ethnicity, education, parental education, marital status, living arrangements, and household income.

Section M - Closing Information and Observations. In this section, address information is collected for the sample person and the interviewer also records reasons a proxy or assistance was required if appropriate, and documents special circumstances. Because they are used for survey administration purposes only, items from section M are not included on the public use file.

D. NBS PUBLIC USE FILE

This codebook describes the content and format of the NBS Public Use Representative Beneficiary data file. The public use file contains 6,520 records and 703 variables. A Restricted Use file is available to users approved by SSA for use on specific research projects. The public use file presents the same survey results, but offers less accessibility to confidential information. Because of its more widespread availability, the public use file has undergone extensive masking and has fewer available variables than the Restricted Use File. Even with the variables masked, however, the NBS public use file offers a wide variety of pertinent variables and topics for the general public to use.

Using SSA's Office of Program Development and Research's (OPDR) Disclosure Checklist for the Public Release of Data, we developed encryption/masking algorithms that would maximize the analytic value of the data while maintaining acceptable confidentiality for the program participants. This file has been approved for release by the OPDR Disclosure Review Board.

1. Variable Exclusion

In order to minimize the likelihood of indirect identification of a sample member, variables that could identify residents of smaller geographic areas or sample members possessing rare attributes (outliers) were deleted. Particular attention was paid to variables showing fewer than 100 sample members with a given characteristic (small cell sizes). The file was also simplified by dropping variables with little analytic value. These included survey administration variables, source variables that had corresponding imputed versions, imputation flags, source variables that were summarized in a constructed variable, and constructed variables that had not yet been utilized in round 1 analyses. Data elements with quality problems that would reduce their analytic value were also dropped. SSA administrative data appended to the restricted access File were also dropped. In their place, select key administrative variables were masked and added to the file as new constructs.

2. Masking and the Construction of New Variables

The remaining variables were assessed for their confidentiality disclosure risk. When survey questions identified relatively rare populations, a new variable was constructed to combine small groups into larger groupings. For many variables that posed a potential risk, constructed variables summarizing the information already existed on the file. When constructed variables did not exist, MPR prepared masking algorithms that maximized their analytic value while maintaining acceptable confidentiality for the program participants. Masking algorithms included

top and bottom-coding of continuous variables, collapsing continuous variables into categories, and combining responses for categorical variables. These public use file constructs were assigned the same variable name as the source variable and end with a “PUB” to indicate that they were created for the public use file. Descriptions of the specific recodes and construct specifications for each variable can found in the codebook.

3. File content and technical specifications

Variables are positioned on the file in the following order:

Sampling variables and weights: this includes administrative variables used for sampling purposes and administrative data that provides additional descriptive information about the sample.

Variables from section B-L of the NBS questionnaire: variables are ordered within each section by related questionnaire item number. Constructed variables created from source variables within a section are ordered at the end of each section.

SSA administrative data: this includes a select set of data from SSA administrative records included on the file to enhance analyses.

The public use file is available in a SAS “sas7bdat” format database and has the following technical specifications:

Data set name: NBSR1PUF
Number of observations: 6,520
Number of variables: 703
Date last created: September 9, 2009

4. Codebook Documentation

To aid the user, this codebook provides extensive documentation for each variable on the file including:

- Variable name: the variable name as it appears in the data file
- Question number: hardcopy question corresponding to the variable
- Label: variable label (a brief description of the variable)
- Question Universe: indicates which respondents were eligible to be asked the question
- N: total number of observations on the data file
- Question Text: the text of the question as it appears on the survey instrument (English only)
- User Notes: provides additional information to the user regarding the variable
- Construct Specs: provides specifications used to create the constructed variables
- Eligible: the number of cases eligible to receive the item
- Width: width of data associated with the variable
- Type: the type of data (numerical or a character)
- Format: SAS format assigned for value labels

Additionally, frequencies are displayed for all categorical variables and means are displayed for continuous variables. For ease of use, frequencies are suppressed when the frequency display would continue on more than one page (for example linkid and date of birth).

For items where a frequency distribution is displayed, frequency counts, numeric values and their labels, and row percentages and cumulative percentages are displayed. For items where a mean is displayed, minimum and maximum values, standard deviation, median, missing (the number of cases with missing data for the item), and baseN (the number of cases with data for the item) are also displayed.

The data user should refer to the National Beneficiary Survey Round 1: User's Guide for Restricted and Public User Files for information about study methodology, file and variable construction, and use of sampling weights.

**INDEX OF NBS PUBLIC USE FILE VARIABLES
IN POSITION ORDER**

Index of NBS Public Use File Variables in Position Order

Variable Name	Variable Label	Variable Number	Page Number
